

Lesson Plan: "The Water Cycle and Its Importance"

Learning Objectives:

Explain the stages of the water cycle and its significance.

Understand the role of evaporation, condensation, and precipitation in the cycle.

Teaching Aids:

Interactive diagrams, videos/animations of the water cycle.

Materials Needed:

Water, heat source, containers, charts of the water cycle.

Activity:

Conduct a hands-on experiment to demonstrate the water cycle. Students observe and document changes in water states.

Recapitulation:

Review the water cycle stages and discuss its significance in nature using an interactive presentation.

Assessment:

Students create a diagram depicting the water cycle stages with explanations.

Reflection:

Reflect on how the water cycle impacts ecosystems and human life.
